

Design and Optimization of Overhead Transmission Lines using PLS-CADD and PLS-Tower Software Theoretical and Practical PLS-CADD training Course

Date

April 12 to 16, 2003

Location

Dubai/Sharjah, United Arab Emirates

The course will take place in the Grand Hotel in Sharjah (UAE). A block of rooms is being reserved for the group attending the course. In order to increase efficiency of the training session, all trainees are required to stay in the same hotel.

Who should attend

Engineers and technicians using or planning to use Computer software PLS-CADD and PLS-TOWER for design, optimization, assessment, upgrade and construction of Overhead Transmission Lines. These software are currently the state-of-the-art and are used by more than 500 utilities and companies in about 50 countries. For more details regarding these software, please visit our Web site www.powline.com.

Course outline

The course will last 5 days, during which the following aspects will be covered in details

- Terrain modeling, survey data, and plan-profile
- Conductor design, modeling and sag-tension calculations
- Structure modeling, geometry, strength and spans,
- Interactive line design and optimization
- Construction drawings and documents
- Assessment of existing lines and options for upgrade

This course will cover in details the use and application of PLS-CADD and partly PLS-Tower and PLS-POLE. This course also includes the theoretical basis of the

engineering concepts upon which the above software is based that are widely used in transmission line design.

The above points will be covered using practical examples and will involve active participation of trainees in order to increase the benefits of this session.

Details regarding the daily schedule are given hereafter.

Instructor

This course will be delivered by Mr. Elias Ghannoum, an internationally renowned expert having 31 years of experience in overhead transmission line design. He worked during 27 years with Hydro-Quebec one of the most important transmission lines utility in the world. He was involved in design and construction of lines with voltage levels from 49 kV to 800 kV as well as HVDC lines up to ± 500 kV.

Mr. Ghannoum is Fellow of the Institute of Electrical and Electronics Engineers (IEEE), and has received Awards from CIGRE and IEEE for outstanding contributions to technical work on transmission lines and best technical paper.

He holds many titles and positions in International standard writing bodies and technical organizations such as:

Chairman of the International Electrotechnical Commission (IEC), Technical Committee 7 "Overhead Conductors"

Chairman of Working Group 8 of IEC/TC11 "Loading and Strength of Overhead Transmission Lines", the Technical Group responsible for writing IEC 60826.

Chairman of Working Group 4 of IEC/TC7 "Aluminum and Aluminum alloy stranded Conductors"

Mr. Ghannoum was chief transmission Engineer for HQ during 20 years before starting his own consultancy practice in 1997. He provided expertise to many international clients such as The World Bank, Electricité de France, Power Grid Corporation of India, etc. He also lectured during 15 years a graduate course on transmission line design at the University Of Montreal, Canada.

Acquisition of the software

Engineers can attend this course even if they have not yet acquired the subject software. The course can help them acquiring engineering knowledge in the field and understanding the capabilities provided by computer aided software PLS-CADD. For those who have not yet acquired the software, a special training

version of PLS-CADD will be made available to them during the training period only.

Purchase of the software can be arranged any time.

Registration

If you are interested in this course and would like to register, or would like more information on the subject, please contact Mr. Ghannoum at the address below and you will be provided with the necessary information and all registration details. Please note that the number of attendees is limited to 12 participants in order to maximize the transfer of knowledge.

Elias Ghannoum, Consultant

76 Ave. Claude Champagne

Design and Optimization of Overhead Transmission Lines using PLS-CADD and PLS-Tower Software

5-day Training course on Theoretical and Practical aspects of PLS-CADD (including an overview of PLS-POLE and TOWER)

Detailed Daily program

DAY 1

Introduction of the Instructor Elias Ghannoum
Introduction of the attendees

Overview Of PLS software and evolution

Need to integrate and computerize all aspects of line design
PLS-CADD system overview
PLS Transmission Structure Programs overview
Presentation of completed projects

Terrain Data and Modeling in PLS-CADD

How to organize project files
View commands - opening of windows - viewing of phases and sags
Needed terrain data and surveying techniques
Prepare a terrain model
 Generate and edit feature codes data
 Generate, edit or import XYZ terrain models
 Create alignments, profiles and side profiles
 Create TIN terrain models
 Break lines
 XYZ vs. user-defined data
 Filtering XYZ data
 Attach DXF and Bitmaps to plan, profile or sheet
Generate, edit or import PFL terrain models
 Scan and digitize existing drawings

DAY 2

Conductor Design and Modeling

Various conductor types
Permanent deformation from overloading

- Permanent deformation from creep
- Effects of high temperature on creep and strength reduction
- Effect of high temperature on aluminum in ACSR conductors
- Conductor models in PLS-CADD
 - Stress-strain charts
 - Where to get conductor data
- Aeolian vibrations - design criteria to limit them
- Temperature vs. ampacity – PLS-CADD implementation of IEEE 738
- Line thermal rating
- Live line rating – link to PLS-CADD

Design criteria

- Weather data
 - Wind and ice loads - gust response factors, etc.
 - Conductor limits of use
 - Conditions for automatic sagging
 - Structure loads and safety factors (loads generated using the ruling span concept)
-Structure load, particularly non-uniform loads using the flexibility of attachment points of conductors
 - Conditions for checking clearances

PLS-CADD/ LITE - simplified PLS-CADD module

- Quick sag/ tension calculations
- Illustration of various sagging methods
- Create load files for TOWER, SPOLE, etc.
- Clearance between lines
- Loads on towers with many cables attached in various directions

Structures Modeling by Allowable Spans (Method 1)

- Available structure models
- Allowable spans method (Methods 1 or 2) - best for standardized designs
- Full analysis method (Methods 3 or 4) - best for assessment and upgrade
- Material lists, create and edit parts lists
- Create and edit Allowable Span (Method 1) Structures

DAY 3

Interactive Line Design

- Spot structures interactively
- String and sag conductors - Demonstrate four sagging methods

Check clearances - vertical, between phases, galloping, etc.
Check overall design efficiency
Modeling of lines crossing
Snap structures to surveyed attachment points

Generate Construction Documents

Plan & Profile sheets, staking lists, stringing charts, offset clipping, etc.
Automatic generation of material lists
Export project data to other commercial databases

Files, backup and support

Project window
Backup / Restore backup
PLS site, news, forum, tech. support

Day 4

PLS-POLE - Structure Modeling of Poles and Frames (Method 4)

Create and edit wood poles and frames
Create and edit steel poles and frames
Create and edit concrete poles and frames
Determining allowable spans of existing structure designs

Modeling Existing Lines, Assessment and Refurbishing

Modeling existing lines and structures
Assessment, reconductoring, refurbishing, etc.
Links to SAPS and SAGSEC
Limits of validity of ruling span concept
Unbalanced ice, RSL after broken conductor, marker balls,
structure deflection, etc.

Automatic minimum cost spotting with PLS-CADD

DAY 5

TOWER - Steel Latticed Tower Analysis and Design

Modeling concepts
Joints, members, connections, tower wind load, conductor loads,
etc.

Handling of planar joints, mechanisms, tension-only members, etc.
Checking and modifying older designs
Automatic member design
Joint transmission/ communication use of towers

Special topics

Prepared by

Elias Ghannoum, Consultant
Power Line Software representative for the Middle-East, India and North Africa
