Two practical courses in transmission line design for design engineers and technicians...

Design of Transmission Line Structures and Foundations

- Gain a solid understanding of transmission line design and behavior
- Learn how to design new transmission lines and upgrade existing ones

January 15–19, 2007 in Orlando, Florida

October 8–12, 2007 in Madison, Wisconsin

Computerized Transmission Line Design: PLS-CADD Hands-On Training

- Learn how to use modern integrated software to expedite your design and upgrade projects
- Practice using transmission line design software at your own computer

January 22–26, 2007 in Orlando, Florida

Design of Transmission Line Structures and Foundations

A comprehensive study of transmission design principles

January 15–19, 2007 in Orlando, Florida

October 8–12, 2007 in Madison, Wisconsin

Computerized Transmission Line Design: PLS-CADD Hands-On Training

A specialized course focusing on computer-aided design

January 22–26, 2007 in Orlando, Florida

Two important courses for transmission line design engineers, structural engineers, consulting engineers, design and drafting technicians, and others needing a thorough understanding of the engineering principles of transmission line design and behavior

Course Summaries

Design of Transmission Line Structures and Foundations

This in-depth course will provide you with the latest criteria and practical techniques used in the design of transmission line structures and foundations. Your instructors first will explain transmission design concepts and then illustrate them with design examples using traditional design methods and modern computer software. This course does not include training in how to use the PLS-CADD computer program.

Course topics include:

- Single and multiple pole structures
- Latticed steel towers
- Conductor design and behavior
- Line assessment and upgrading concepts
- Strength analysis for joint use
- Foundation design

This up-to-date course applies to the design of new transmission lines and the upgrade of existing ones.

Computerized Transmission Line Design: PLS-CADD Hands-On Training

The purpose of this course is to teach you how to use the PLS-CADD computer program. This computer lab course includes background theory and hands-on computer modeling. Lectures will present the basic concepts, and computer exercises will illustrate them. Numerous case studies will provide a range of real-life examples.

Course topics include:

- Software system overview and terrain modeling
- Conductor design and modeling
- Structures modeling by allowable spans
- Interactive line design and generation of construction documents
- Modeling existing lines, assessment, and refurbishment
- Using detailed structure models for strength verification

This course will provide you with the training you need to be more proficient with the computer software that will make you more effective on your job.

Expert Instructors

The instructors for these courses are recognized experts in their fields. They are experienced design engineers with many years of practical experience in transmission line and foundation design.

Alain Peyrot

Principal Instructor

Dr. Alain Peyrot, professor emeritus of civil engineering at the University of Wisconsin–Madison, is a primary instructor and course coordinator for both of these courses. Dr. Peyrot is recognized throughout the industry as an expert in transmission line design and is one of the developers of the widely used transmission line design software program, PLS-CADD. You will benefit from Dr. Peyrot's expert teaching abilities and his career-long experience in transmission line design.

Real-Life Examples

The concepts presented in these courses will be reinforced with case studies from the actual work history of your experienced instructors. These practical applications of engineering design techniques will assist your learning and show you how to apply the knowledge you gain in these courses to real-life problems you face on the job.

Design of Transmission Line Structures and Foundations

January 15–19, 2007 in Orlando, Florida

October 8–12, 2007 in Madison, Wisconsin

Learn How to Design New Transmission Facilities and Upgrade Existing Ones

A comprehensive design guide

At this technical course you will learn the latest criteria and practical techniques for the design of transmission line structures and their foundations. You will study various types of supporting structures, including wood, concrete, and tubular and latticed steel. You will also learn about conductor design and behavior under various operating temperatures and weather conditions. You will examine concepts for assessing and upgrading the capability of existing transmission lines. This course does not include training in how to use the PLS-CADD computer program.

Transmission capacity in short supply

Deregulation has changed the way the electric grid is being used. Power transfers have increased transmission flows and taxed the capacity of existing lines. In addition, loads have grown substantially over the last decade while few new transmission lines were built. These factors have produced a shortage of transmission capacity in many areas of the United States.

More capacity needed

New transmission lines will need to be built to meet the requirements of growing loads and operation under deregulation. Where right-of-way is at a premium and new lines cannot be built, existing lines will need to be upgraded to meet growing needs.

Learn transmission design principles

Construction of new lines and upgrading of existing ones will require comprehensive knowledge of transmission line conductors, structures, and foundations. This course will give you the knowledge you need to effectively design new lines and modify existing ones to meet the future needs of the electric transmission system.

Bring Your Own Laptop Computer

January 2007 and October 2007 courses

Foundation design exercises will be computer-based. For this purpose, we ask that students bring their own laptop computers for both course dates. See computer hardware requirements below. Contact Program Director John Raksany (raksany@epd.engr.wisc.edu; 800-462-0876) if you have questions or prefer to rent a computer for a \$250 weekly fee.

Computer Hardware Requirements

Your laptop must have Microsoft Windows 2000 or XP installed. It must also have an 800 MHz or faster processor, a minimum of 256 MB of RAM, and 200 MB of available disk space. A two-button mouse is also recommended.

Key Course Topics

- Design criteria and loads
- Wind, ice, and broken conductor loads
- Basic sag and slack equations
- Survey data and clearance requirements
- Spotting transmission structures
- Conductor design and behavior
- Assessing existing capability
- Structural analysis for upgrading/reconductoring
- Strength analysis for joint use
- Foundations for single poles, frames, and towers

You'll Learn How To

- Analyze single and multiple pole structures
- Apply basic buckling equations to wood pole designs
- Model and analyze steel latticed towers
- Check structure strengths and line clearances
- Apply NESC overload factors

Benefit from Case Studies

Your instructors, experienced design engineers, will use case studies and design examples to illustrate (1) actual applications of the concepts discussed in this course and (2) the real-world design issues you may face in the field.

Who Should Attend

This course will benefit those people involved in the design and construction of transmission line structures and their foundations. This includes:

- Transmission line design engineers
- Structural engineers
- Consulting engineers
- Design and drafting technicians
- CAD technicians
- Surveyors

Experienced individuals and those recently assigned to transmission line projects will benefit from this course.

Computer Software Included with Course

The transmission design concepts presented in this course will be illustrated through design examples using the line design program PLS-CADD, developed by Power Line Systems, Inc. You will receive a CD and instructions for a free one-year license to use a subset of that program (PLS-CADD/LITE) that calculates sags, tensions, loading trees, and thermal rating of overhead conductors.

Course Instructors

Dr. Anthony M. DiGioia Jr. is president of DiGioia, Gray & Associates LLC and former president and chairman of GAI Consultants. Dr. DiGioia manages major projects in various areas of civil engineering, including soil mechanics, foundation engineering, and probabilistic analysis and design of transmission line structures and foundations. As an assistant professor of civil engineering at Carnegie Mellon University, he taught courses on various subjects, including soil mechanics, foundation engineering, and bridge foundation design. He is currently an adjunct professor in the Civil & Environmental Engineering Department of CMU and a member of ASCE, SAME, ASTM, CIGRE and IEEE.

Robert O. Kluge PE, team leader-design standards at American Transmission Company in Madison, Wisconsin, has more than 25 years of experience in structural engineering and transmission line design at American Transmission

Company and Alliant Energy (formerly Wisconsin Power and Light Co.). His experience includes numerous transmission line capacity assessment and upgrade projects. He is a member of IEEE-Power Engineering Society, Tower Poles and Conductors Committee, and an IEEE delegate to the Accredited Standards Committee (ASC) O5 for Wood Poles, Laminates and Crossarms. He represents Edison Electric Institute (EEI) on the National Electrical Safety Code (NESC) Subcommittee 5 on Loading and Strength.

Dr. Alain H. Peyrot PE, president of Power Line Systems, Inc., Madison, Wisconsin, has a broad range of experience in structural engineering and design. As a professor of civil engineering at the University of Wisconsin-Madison, he has taught courses on the design of steel, reinforced concrete and wood structures, finite elements and probabilistic methods, structural dynamics and optimization, wind and earthquake engineering, and design of transmission lines. Dr. Peyrot has worked as a consultant on many engineering and research problems, specializing in transmission line design and behavior. He is the author of more than 100 technical papers.

Past Attendees Say...

“This has been the best technical seminar that I have attended. The information was provided in a manner that makes it applicable to the daily engineering activities of the utility industry.”

Brandon Boone, Lead Service Planner, Sumter Electric Cooperative, Inc., Sumterville, FL

“The course and notebook are excellent! The notebook will be a great design reference for me in my daily job of designing transmission lines. I really liked the integration of using PLS-CADD, TOWER, etc. into the course. Very helpful and interesting.”

Michael Braithwaite, Civil Engineer, Nevada Power

“I have attended several short courses and this has been the best. Organization, presentation, and content were superb. The speakers were very effective in communicating the materials.”

Jeremy Pettus, EIT, Tennessee Valley Authority, Chattanooga, TN

“Very well taught. I really liked how Dr. Peyrot did hand calculations for analysis of a pole. We use that a lot and it was good to know we are doing it right.”

Keith Riggio, Junior Engineer, Central Hudson Gas & Electric, Poughkeepsie, NY

Design of Transmission Line Structures and Foundations

January 15–19, 2007 in Orlando, Florida

October 8–12, 2007 in Madison, Wisconsin

Course Outline

Monday

7:30 Registration

January 15–19, 2007
in Orlando:

The Holiday Inn–International
Drive Resort

6515 International Drive

October 8–12, 2007
in Madison:

The Pyle Center

702 Langdon Street

8:00 Welcome

John A. Raksany PE

Program Director

Department of Engineering
Professional Development

University of Wisconsin–Madison

8:15 Instruction Begins

Dr. Alain H. Peyrot

1. Design Criteria and Loads

- Design philosophies
- Codes and standards
- Wind and ice loads
- Longitudinal loads
- Concepts of wind and weight spans

2. Behavior of Suspended Cables

- Basic sag and slack equations
- Ruling span concept
- Offset clipping
- Interaction between structures and cables

3. Loading Tree

4:30 Adjournment

Tuesday

8:00 Instruction Continues

Dr. Alain H. Peyrot

4. Conductor Design and Behavior

- Conductor types
- Creep and permanent elongation
- Sag-tension calculations
- High-temperature effects
- Current vs. temperature relationships
- Vibration and galloping

5. Basic Structure Spotting

- Strength considerations
- Clearance requirements

6. Computer Analysis and Design Tools

- PLS-CADD/LITE
- 3-dimensional line modeling
- Examples

4:30 Adjournment

7:00 Optional Evening Session

Advanced Computer Analysis and Design Tools

- Design examples that illustrate modern computer design capabilities through use of the PLS-CADD software tool

9:00 Adjournment

Wednesday

8:00 Instruction Continues

Dr. Alain H. Peyrot

Robert O. Kluge PE (Madison
course only)

7. Design of Wood Poles

- Unguyed and guyed

8. Design of Tubular Steel Poles

9. Design of Concrete Poles

10. Design of Wood H-Frames

11. Line Assessment and Upgrading Concepts

- Assessing existing capability
- Elevated temperature operation
- Re-tensioning/re-sagging
- Pole joint use issues
- Structural analysis for upgrading/reconductoring

12. Case Studies: Transmission Line Capacity Assessment and Up-Rating

Installing larger conductor on a 138 kV, double circuit steel latticed tower line

4:30 Adjournment

Thursday

8:00 Instruction Continues

Dr. Alain H. Peyrot

13. Design of Steel Latticed Towers

- Tower configurations
- Modeling for analysis
- Detailed design criteria
- Examples

1:00 Instruction Continues

Dr. Anthony M. DiGioia

14. Foundations

- How to specify, analyze, and use soil investigations
- Types of foundations

15. Foundations for Single Poles

- Analysis and design methods
- Examples

4:30 Adjournment

Friday

8:00 Instruction Continues

Dr. Anthony M. DiGioia

16. Foundations for Frames and Towers

- Factors influencing type of foundations
- Analysis and design methods
- Examples

17. Guy Anchors

3:00 Final Adjournment

Daily Schedule

The daily schedule for both courses will include morning and afternoon refreshment breaks and lunch at noon. The courses will be conducted in a smoke-free environment.

“Excellent course. This course provided information essential to anyone involved in transmission engineering and design.”

Richard Goddard, Manager, Transmission Engineering and Project Management, Portland General Electric

Hotel Room Availability in Orlando

Please note that hotel rooms may be scarce in Orlando during this January period. If you plan, or tentatively plan, to attend this course, please reserve your hotel room early and before the cut-off dates listed in the accommodations section.

Computerized Transmission Line Design: PLS-CADD Hands-On Training

January 22–26, 2007 in Orlando, Florida

Learn How to Use PLS-CADD Through Computer Exercises

The purpose of this course is to teach you how to use the PLS-CADD computer program. The course emphasizes hands-on computer modeling. Your instructor will first explain a basic transmission design concept and then demonstrate how to implement that design principle using the PLS-CADD software. Students will then execute the same design principles on their own computers. Numerous case studies will provide a range of real-life examples.

Benefit from Modern Computer Technology

Advanced software aids transmission design process

Advanced computer programs are available to aid the transmission design engineer in the structural and geometric design of electric power lines. Computer software also makes it possible to more easily produce related construction documents such as plan-and-profile drawings and material lists.

Software not always used to full potential

While computer tools are available to greatly increase the design engineer's productivity and work quality, they are often not used to their full potential. One reason is a lack of training or understanding of modern survey techniques, proper design criteria, line behavior, structural analysis, and drafting. A second reason is an ineffective integration of these new design tools.

Learn how to use integrated software

At this course you will have hands-on training on how to use advanced transmission design software that has integrated the various surveying, engineering, drafting, and material management functions. Your training will help you become proficient at using this advanced software and help you be more productive when using it in your work.

Get the Training You Need To Be More Effective on Your Job

The purpose of this course is to teach design engineers and technicians how to use the PLS-CADD computer program. Case studies will provide real-life examples. This course will provide you with the training you need to more effectively use PLS-CADD software on your job.

Special Features of This Course

- Background theory and computer exercises
- Review of basic line design concepts
- Modern integrated software
- Case studies

Hands-On Training...Limited Enrollment

Because this course features intensive hands-on computer training, we limit enrollment to 20 students. Enroll early to ensure your place in the class.

"I really liked the intermingled combination of hands-on computer work, illustrations of practical situations, and understandable explanations of the associated physics. Excellent course, I learned a lot!"

Mark Hiple, Supervising Engineer, Ameren IP

Who Should Attend

This course is intended for transmission engineers, technicians, and managers who are using or planning to use computerized line design tools. This includes:

- Transmission line design engineers
- Structural engineers
- Consulting engineers
- Design and drafting technicians
- CAD technicians
- Surveyors

Computer Software Used in This Course

The computerized design tool capabilities presented in this course will be illustrated through design examples using the programs PLS-CADD, PLS-POLE and TOWER, developed by Power Line Systems, Inc. These programs and classroom example files will be installed on each classroom computer for students to use during class.

Bring Your Own Laptop Computer

We ask that students bring their own laptop computers for this January 2007 course held in Orlando, Florida. See computer hardware requirements below. If you prefer to rent a computer for a \$250 weekly fee, please indicate that choice on the enrollment form. Contact Program Director John Raksany (raksany@epd.engr.wisc.edu; 800-462-0876) if you have questions.

Computer Hardware Requirements

If you are already a PLS-CADD user, please bring a laptop on which you have previously run the PLS-CADD software. Your laptop must have Microsoft Windows 2000 or XP installed. It must also have an 800 MHz or faster processor, a minimum of 256 MB of RAM, 200 MB of available disk space, and an available USB port for hardware key connection. A two-button mouse is also recommended.

Computerized Transmission Line Design: PLS-CADD Hands-On Training

January 22–26, 2007 in Orlando, Florida

Course Instructors

Otto J. Lynch PE, vice president of Power Line Systems, Inc., Madison, Wisconsin, is responsible for the technical sales and development of overhead line software. He is an expert in the PLS-CADD computer program and has conducted numerous seminars and training sessions in its use and applications. A pioneer in integrating LiDAR aerial survey data into the PLS-CADD program for transmission line rerating and reconductoring projects, Mr. Lynch is an expert in all the computer programs used throughout the course.

Dr. Alain H. Peyrot PE, president of Power Line Systems, Inc., Madison, Wisconsin, is one of the creators of the PLS-CADD, PLS-POLE, and TOWER computer programs. An emeritus professor of civil engineering at the University of Wisconsin–Madison, he has taught numerous PLS-CADD training courses, as well as university courses on the design of steel, reinforced concrete and wood structures, finite elements and probabilistic methods, structural dynamics and optimization, wind and earthquake engineering, and design of transmission lines.

Course Outline

Monday, January 22

7:30 Registration

The Holiday Inn–International
Drive Resort
6515 International Drive
Orlando, Florida

8:00 Welcome

John A. Raksany PE
Program Director
University of Wisconsin–Madison

8:15 Instruction Begins

1. Overview and Terrain Modeling

- PLS-CADD system overview
- Presentation of projects
- How to organize project files
- View commands, opening of windows, viewing of phases and sags
- Needed terrain data and surveying techniques
- Prepare a terrain model
 - generate and edit feature codes data
 - import/generate and edit terrain files: XYZ or PFL models
 - digitize existing drawings

5:00 Adjournment

Tuesday, January 23

8:00 Instruction Continues

2. Conductor Design and Modeling

- Various conductor types
- Conductor properties: advantages and disadvantages
- Permanent deformation from overloading and creep
- Effects of high temperature on creep and strength reduction
- Conductor models in PLS-CADD
 - stress-strain charts
 - where to get conductor data
- Aeolian vibrations: how to limit
- Temperature vs. ampacity
- Line thermal rating

3. Design Criteria

- Weather data
- Wind and ice loads: gust response factors, etc.
- Conductor limits of use
- Conditions for automatic sagging
- Structure loads and safety factors
- Conditions for checking clearances
- PLS-CADD/LITE: simplified PLS-CADD module
 - quick sag/tension calculations
 - various sagging methods
 - create load files for TOWER and PLS-POLE

5:00 Adjournment

Wednesday, January 24

8:00 Instruction Continues

4. Structures Modeling by Allowable Spans

- Available structure models
 - allowable spans method
 - full analysis method
- Material lists, parts lists
- Create and edit allowable span structures

5. Interactive Line Design

- Spot structures interactively
- String and sag conductors: demonstrate four sagging methods
- Check clearances: vertical, between phases, galloping, etc.
- Check overall design efficiency

6. Generate Construction Documents

- Plan-and-profile sheets, staking lists, stringing charts, offset clipping, etc.

5:00 Adjournment

Thursday, January 25

8:00 Instruction Continues

7. Modeling of Poles and Frames by Analysis

- Overview of structure programs; PLS-POLE
- Create and edit wood, steel and concrete poles/frames
- Determining allowable spans of existing structure designs

8. Modeling Existing Lines, Assessment and Refurbishing

- Modeling existing lines and structures
- Assessment, reconductoring, refurbishing, etc.
- Joint use issues and modeling
- Links to SAPS
 - limits of validity of ruling span concept
 - unbalanced ice, RSL after broken conductor, marker balls, structure deflection, etc.

5:00 Adjournment

Friday, January 26

8:00 Instruction Continues

9. Automatic Optimum Spotting

- Theory and examples

10. Checking Detailed Tower Models

- Brief overview of TOWER program capabilities
- Linkage between PLS-CADD and TOWER
- Checking and modifying older tower designs

3:00 Final Adjournment

“I thought that the class and content were wonderful. Otto Lynch did a great job teaching this course!”

Scott Higley, Engineering Technician,
Springfield Utility Board, Springfield, OR

Hotel Room Availability in Orlando

Please note that hotel rooms may be scarce in Orlando during this January period. If you plan, or tentatively plan, to attend this course, please reserve your hotel room early and before the cut-off dates listed in the accommodations section.

Four Easy Ways to Enroll

General Information

Fees

**January 15–19, 2007 and
October 8–12, 2007 Courses:**

Fee of \$1895 covers course materials, break refreshments, lunches, and certificate.

January 22–26, 2007 PLS-CADD Course:

Fee of \$2095 covers course materials, break refreshments, lunches, and certificate.

Cancellation

**January 15–19, 2007 and
October 8–12, 2007 Courses:**

If you cannot attend, please notify us at least 7 days prior to the first day of the course, and we will refund your fee. Cancellations received after this date and no-shows are subject to a \$150 administrative fee. You may enroll a substitute at any time before the course starts.

January 22–26, 2007 PLS-CADD Course:

*This limited enrollment course requires fee payment at time of enrollment. If you cannot attend, please notify us by January 15, and we will refund your fee. Cancellations received after this date and no-shows will be charged the full course fee. You may enroll a substitute at any time before the course starts.

Location

**January 15–19, 2007 and
January 22–26, 2007 Courses:**

The Holiday Inn–International Drive Resort, 6515 International Drive, Orlando, Florida. If you must be contacted during the course, phone messages may be left for you at 407-351-3500.

October 8–12, 2007 Course:

The Pyle Center, 702 Langdon Street, Madison, Wisconsin. If you must be contacted during the course, phone messages may be left for you at 608-262-1122.

Accommodations

January 15–19, 2007 Course:

We have reserved a block of rooms for course participants at The Holiday Inn–International Drive Resort, 6515 International Drive, Orlando, Florida. To reserve a room (\$91 sgl/dbl), call 866-253-2183 or 407-351-3500 by January 2 and mention the University of Wisconsin–Madison and this course.

January 22–26, 2007 PLS-CADD Course:

We have reserved a block of rooms for course participants at The Holiday Inn–International Drive Resort, 6515 International Drive, Orlando, Florida. To reserve a room (\$91 sgl/dbl), call 866-253-2183 or 407-351-3500 by January 2 and mention the University of Wisconsin–Madison and this course.

October 8–12, 2007 Course:

We have reserved a block of rooms for course participants (\$104 sgl/\$119 dbl) at the Campus Inn, 601 Langdon Street, Madison, Wisconsin. To reserve a room, call the Campus Inn at 800-589-6285 or 608-257-4391 by September 1 and mention this course and group code 50829.

Earn Continuing Education Credit

By participating in one of these courses, you will earn 3.4 Continuing Education Units (CEU) or 34 Professional Development Hours (PDH).
