GPSTabel

GPSTabel lets you move data between popular GPS systems such as those from [Garmin](#), [Magellan](#) or a large number of [map programs](#).

GPSTabel is Free Software. You are free to use it within terms of the [GNU Public License](#). The punchline of this license is that it lets you modify the program and redistribute it, but you also have to share your modifications with others.

Please Support the Project

If you find GPSTabel useful, please help support it. It's quick and easy to support GPSTabel financially. Your financial support is used to fund equipment and software for development and testing. Someone paid for the features you're using now.

Contributions of time are even more welcome. Whether you're a doc writer, a bit-slinger, a webmaster, or just someone patient answering questions, we can always use more help.

We can accept credit cards via [PayPal](#)
